

Y6 Spring Term

Survival of the Fittest

The following activities are optional homework activities that you could do to further your learning in school. If you complete one of them, we would love for you to share it with the rest of your class, either as a photo or by bringing the finished product in.

Produce a comic strip showing the life of Charles Darwin (including how he developed his theory of evolution).

Create your own fact file about an animal that lives on the Galapagos Islands.

Become a naturalist. Study an animal over a period of time and keep a diary of what you observe. This could be a bird from the garden or a pet, etc.

Research Darwin's voyage and produce a world map which shows where he travelled. You could tea-stain some paper to really make it look old!

Watch an episode of a David Attenborough documentary (or maybe more than one – they're brilliant). Record the Top 10 facts you learnt.

Research a famous explorer from history. Create a poster or slideshow that shows what you've learnt about them and what they achieved.
